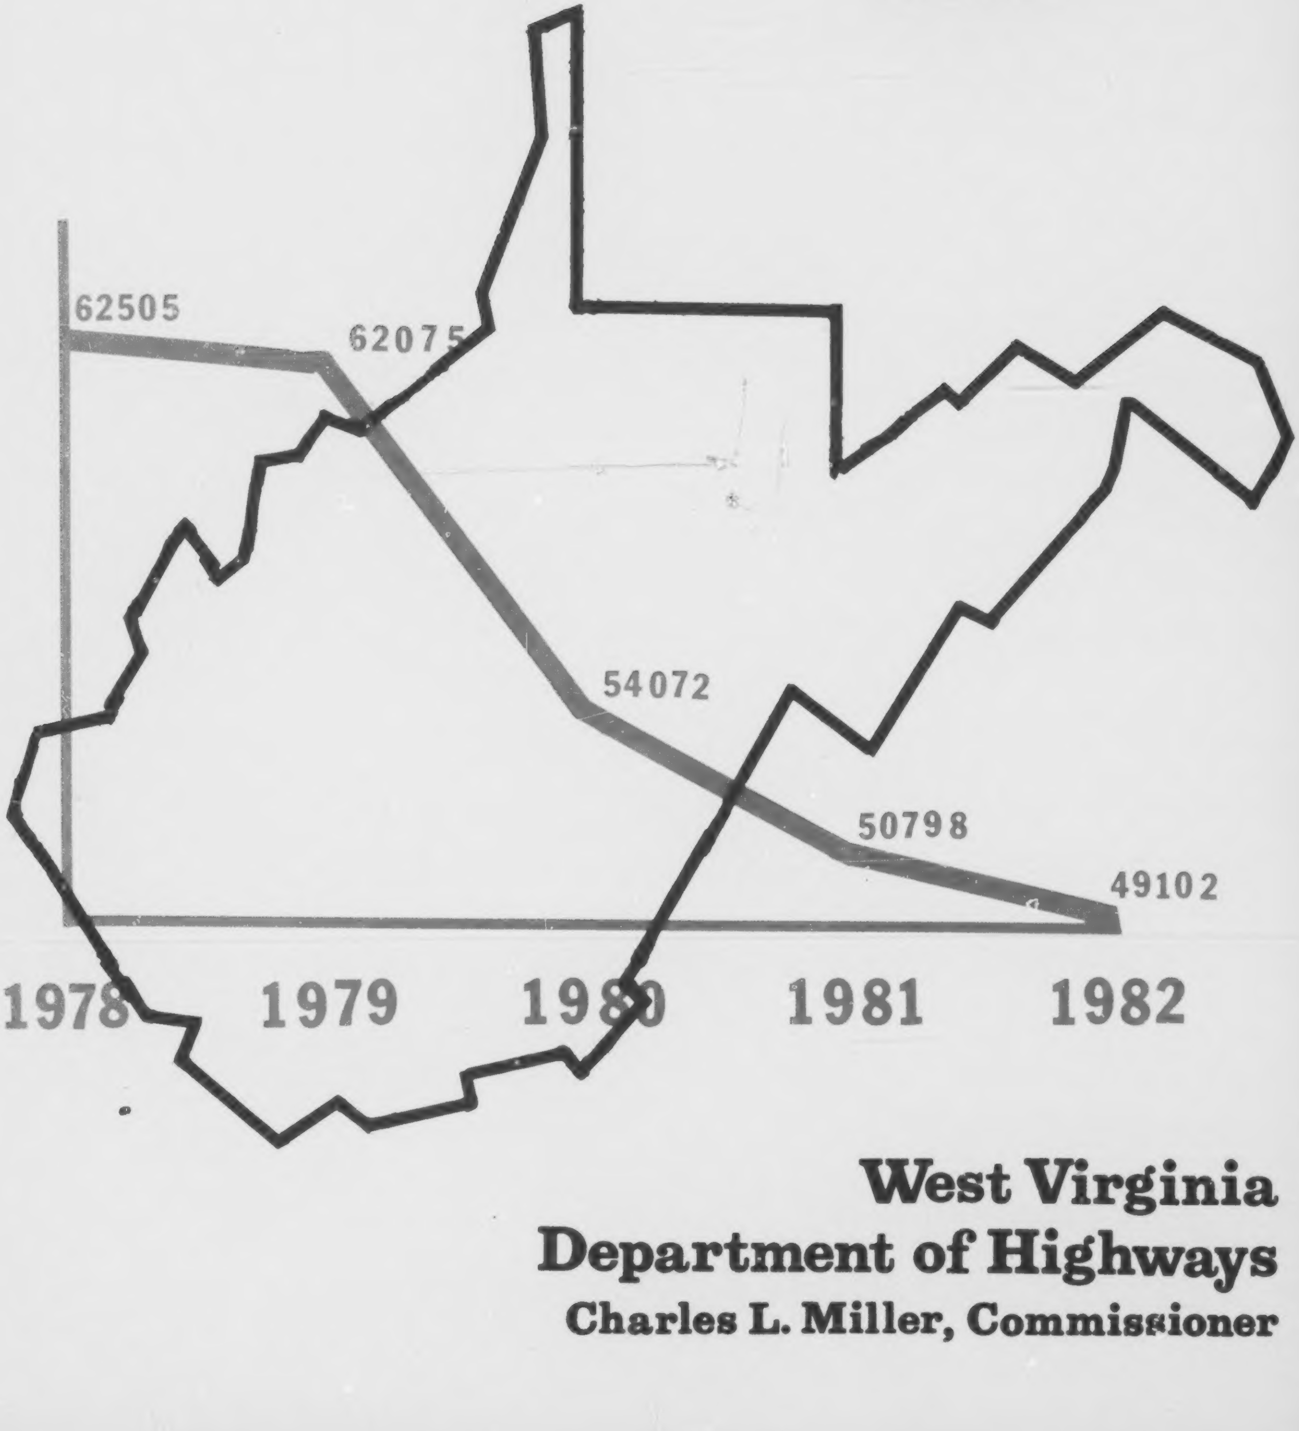
West Virginia Accident Data 1982



West Virginia Department of Highways

Charles L. Miller, Commissioner

WEST VIRGINIA DEPARTMENT OF HIGHWAYS

1900 Washington Street, East
Charleston, West Virginia
25305

JOHN D. ROCKEFELLER IV
GOVERNOR

CHARLES L. MILLER
COMMISSIONER

TO USERS OF HIGHWAY ACCIDENT DATA:

The West Virginia Accident Data 1982 Report, providing summarized findings and statistics of highway accidents, is for your information and circulation. The information contained herein was prepared by personnel of the West Virginia Department of Highways based on information extracted from accident reports submitted to the West Virginia Department of Motor Vehicles. The tabulations were prepared by our Department using the Traffic Records Information System (TRIS) computer processing of data.

The Department sincerely hopes that the publication of this material will be valuable in the identification and evaluation of problems associated with highway safety. However, this report is only intended as a listing of locations on the State Highway System which have concentrations of or abrupt changes in accidents. It is to be used as a basis for further study and is not to be construed as a listing of priorities or as a program of improvements.

Sincerely yours,

Charles L. Miller

Charles L. Miller
Commissioner

GENERAL SUMMARY

1982 DATA

In 1982, as a result of Traffic Accidents in West Virginia there were:

*ACCIDENTS	49,102
FATALITIES	465
PEOPLE INJURED	25,854
PROPERTY DAMAGE	$92,110,099
ECONOMIC LOSS	$307,656,960
VEHICLE MILES DRIVEN	10,623,748,000

Currently in West Virginia there are:

DRIVERS LICENSED	1,604,371
MOTOR VEHICLES REGISTERED	1,356,927
ROADWAY MILES MAINTAINED	34,103

*Only accidents reported on the Uniform Traffic Accident Report

1982 SUMMARY

		1982	1981		
TOTALS	ACCIDENTS	49,102	50,798	↓	3.3%
	INJURIES	25,854	23,406	↑	10.5%
	FATALITIES	465	460	↑	1.1%
FACTORS	WET ROADS	11,454	11,292	↑	1.4%

% Of All Reported Accidents In 1982 By Data Source

CRITICAL ACCIDENT RATE LOCATIONS

Analyzing traffic accidents can be very difficult because they are normally regarded as statistically rare events. For this reason, extreme care should be used to avoid concluding too much from too few accidents. Also, the use of accident totals is but a basic method of measuring the hazardousness of a location and can be misleading unless other factors are taken into account. Some of the more common factors are variations in traffic volumes, accident severity, distances involved, time parameters, categories of highways, etc.

A standard method of comparing high-accident locations is the accident rate, which is the number of accidents that take place divided by the vehicle exposure. The highway sections noted in this report are tabulated on the basis of hundred million vehicle miles of traffic passing through that specific section. This rate can be abbreviated as accidents/HMVM.

We have used probably the most complicated and difficult method of accident analysis to compare the accident rates on highway sections in our state. This method called the rate/quality-control method requires more calculations than other methods, but we felt it was the most accurate. By the use of computer processing and the STATEWIDE ACCIDENT AND ROADWAY FILES, systemwide averages can be developed for various categories of highways. These averages are used in a statistical test (a mathematical formula) that is applied to each 0.50 mile segment of highways in the state. This test assures "quality control" by determining that the accident rate at a particular location is really unusually high. Locations with an actual accident rate that exceeded the calculated critical rate were placed on computerized output. A location was disregarded unless the minimum number of accidents on the highway segment was seven (7) or greater.

A computerized report was generated for various highway categories such as: rural interstate, urban interstate, urban primary-2 lanes, urban primary-4 lanes, rural primary-4 lanes, county routes-over 500 ADT, etc. These reports were reviewed and a list of high hazard locations was compiled. The methodology used for the determination of critical accident rate locations included in the 1982 West Virginia Accident Data report is as follows:

First, the three (3) most current years' data (1980-1982) were used as the data base. Second, we did not include the equivalent-property damage only (EPDO) weighting number method. Our experience in previous years was that the EPDO information virtually duplicated the critical rate data. Third, locations have been included for the Interstate, US, WV and CR highway categories. Finally, a critical rate location was identified by specific location, mapping, and description when the three-year accident rate was a minimum of two (2) times greater than the calculated critical rate.

Accident totals and rates during the three years (1980-1982) were tabulated for each location listed in the high hazard list and specific location description detail is provided for 28 critical rate locations.

BASE ACCIDENT RATES

1980 - 1982

HIGHWAY TYPE	*RATE PER HMVM
Rural Interstate	69
Urban Interstate	131
Rural Primary	367
Rural Primary - Two Lanes	376
Rural Primary - Two Lanes less than 16'	---
Rural Primary - Two Lanes 16'-17'	469
Rural Primary - Two Lanes 18'-22'	379
Rural Primary - Two Lanes Over 22'	312
Rural Primary - Four Lanes	184
Rural Primary - Four Lanes Controlled Access	134
Urban Primary	715
Urban Primary - Two Lanes	743
Urban Primary - Four Lanes	474
County Routes over 500 ADT	418
Rural County Routes over 500 ADT less than 16'	310
Rural County Routes over 500 ADT 16'-17'	388
Rural County Routes over 500 ADT 18'-22'	422
Urban County Routes over 500 ADT - Two Lanes	519

FATAL ACCIDENT CLUSTERS

Traffic accidents tend to be infrequent and random-type events, and only a few accidents result in loss of life. Any major intersection of traffic along with fixed objects and pedestrians over the period of a year can have conflicts or exposures that will accrue into the millions. Therefore, the chance of an accident is literally one in a million(s) and the probability of a spot location with repeated fatal accidents is much lower.

Even with this low probability, cluster locations can be identified over a period of time. The Fatal Accident Locations in West Virginia have been reviewed from January 1, 1978 through June 30, 1983, and a list of cluster locations compiled. These locations had three fatal accidents occur within a 0.40-mile segment of highway with at least one fatal accident during the last three years.

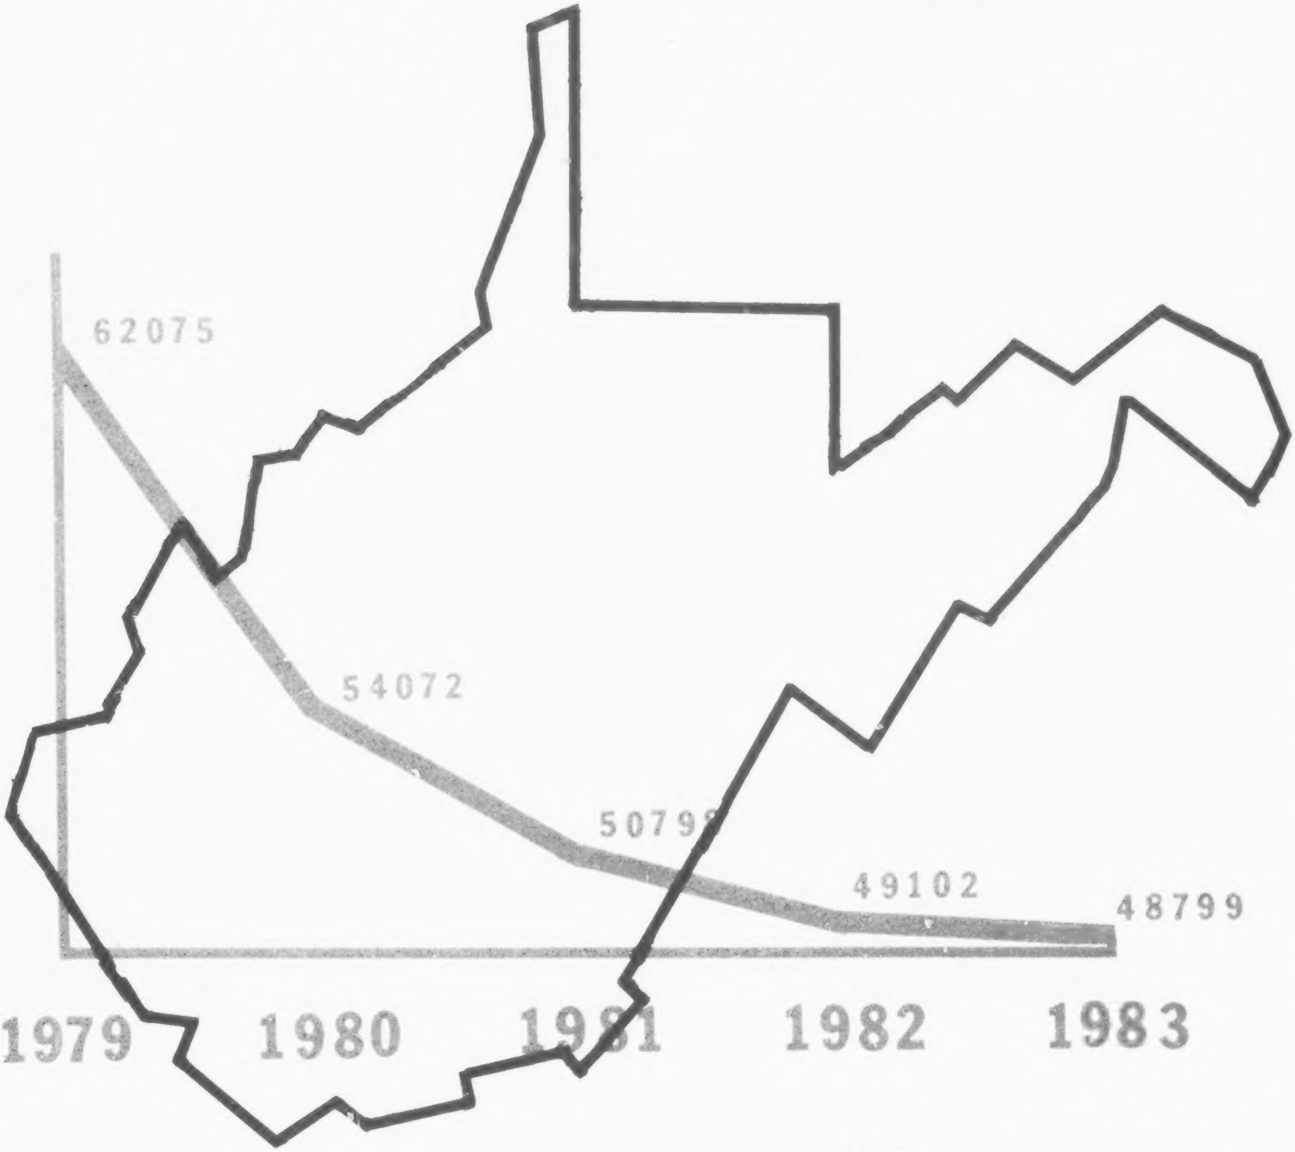
West Virginia Accident Data 1983



West Virginia
Department of Highways
Charles L. Miller, Commissioner

WEST VIRGINIA DEPARTMENT OF HIGHWAYS
1900 Washington Street, East
Charleston, West Virginia
25305

JOHN D. ROCKEFELLER IV
GOVERNOR

CHARLES L. MILLER
COMMISSIONER

TO USERS OF HIGHWAY ACCIDENT DATA:

The West Virginia Accident Data 1983 Report, providing summarized findings and statistics of highway accidents, is for your information and circulation. The information contained herein was prepared by personnel of the West Virginia Department of Highways based on information extracted from accident reports submitted to the West Virginia Department of Motor Vehicles. The tabulations were prepared by our Department using the Traffic Records Information System (TRIS) computer processing of data.

The Department sincerely hopes that the publication of this material will be valuable in the identification and evaluation of problems associated with highway safety. However, this report is only intended to serve as an information document. It is to be used as a basis for further study and is not to be construed as a listing of priorities or as a program of improvements.

Very truly yours,

Charles L. Miller
Commissioner

Federal Highway Administration

GENERAL SUMMARY

1983 DATA

In 1983, as a result of Traffic Accidents in West Virginia there were:

*ACCIDENTS	48,799
FATALITIES	434
PEOPLE INJURED	25,377
PROPERTY DAMAGE	$ 94,664,480
ECONOMIC LOSS	$ 298,037,780
VEHICLE MILES DRIVEN	11,137,349,000

Currently in West Virginia there are:

DRIVERS LICENSES	1,604,371
MOTOR VEHICLES REGISTERED	1,356,927
ROADWAY MILES MAINTAINED	34,173

*Only accidents reported on the Uniform Traffic Accident Report

1983 SUMMARY
